Techno-legal requirements

- R1. Ability to model policies for both data subjects/holders and data controllers/users.
- R2. Support legal requirements for health data exchange.
- R3. Define the necessity of these requirements according to the identified legal framework.
- R4. Specify 'pre-defined' templates for common exchanges.
- R5. Generate agreements for specific health-related data exchanges between 2 parties.

Abstract

This document defines a framework for modelling and cataloguing health data exchange conditions, aligned with legal requirements, e.g., from the European Union's General Data Protection Regulation (GDPR) and the European Health Data Spaces (EHDS) regulation, using semantic standards and specifications such as the [Open Digital Rights Language \(ODRL\)](#) and the [Data Privacy Vocabulary \(DPV\)](#).

§ 1. Introduction

The increasing digitalisation of healthcare has led to the generation of vast amounts of health-related data from multiple sources, including clinical records, wearable devices, and patient-generated data. However, the

Interoperable Interpretation and Evaluation of ODRL Policies

Session 4 – Privacy and Security: **Tuesday, June 3rd 2025, 14h20 - 14h40** – Mediteranea hall Floor 11

Agreement Instantiation

- Validate the proper modelling of the odrl:Policy, odrl:Request and SoTW information.
- Convert compact policies into their atomic equivalents.
- Remove the rules that are not relevant for the request.
- Reference the ODRL request that triggered the agreement instantiation and the policies from the data subject/holder.
- Instantiate the concrete assigner and assignee of the agreement.
- Include relevant rules with concrete actions, targets and constraints.
